

## PRODUCT DATASHEET

### TeleCare FSA Fallsensor

An wristband that registers every fall!

---

#### **Explanation:**

Falls can have devastating consequences if help does not come immediately.

The fall sensor wristband by TeleCare is an indispensable companion for elderly people for this very reason. As soon as it records a fall, it sounds the alarm over the NEO emergency call system or the mobile alarm receiver TREX.

Thanks to the most advanced technology available, the device is able to distinguish between falls and other sudden movements. The sensor recognizes sudden acceleration that ends abruptly.

To prevent false alarms, a pending alarm is indicated by vibration. One need only move one's arm in this time and the alarm will not be sent.

---

#### **Vantages:**

- automatic alarm release by position change followed by an impact
  - alarm release also with push button
  - Test alarm function
  - Battery status supervision
  - Reliable radio communication with acknowledgement
  - 869.200-869.250 MHz frequency dedicated for social alarms
- 

\*Changes, errors and omissions excepted.
