

## PRODUCT DATASHEET

### TeleCare NEMO Care

A reliable companion at home or out door!

---

#### Explanation:

The great strength of the NEMO mobile care phone is its versatility: In your own four walls, in the garden, outdoors or on the way from point A to point B. Seniors, at-risk-patients, children and members of professions who often work alone, e.g. caregivers, farmers, security personnel or hunters need a modern, innovative companion. It can be used like a mobile phone on the go – but also as a normal personal emergency call device at home.

NEMO Care with or without GPS module is available for mobile use. In the variant with GPS module there is the option of locating the NEMO Care user in a serious case.

The alarm is sent via SMS and/or a call. The SMS transmits the coordinates where the NEMO Care device is currently located.

If NEMO Care is used as a personal alarm system, it is compatible with all accessories for our stationary emergency call systems thanks to the optional wireless components: From wireless alarms providing protection from smoke, gas, water or break-ins, to the ATOM hand-held wireless transmitter. Coupled with the proven water-tight hand-held transmitter, ATOM, an alarm can be sent at any time, even if the base device is not within reach, such as in the shower or in the garden.

---

#### Vantages:

- easy to handle and installation
  - displays status
  - rechargeable Lithium-Ion battery
  - function as passive alarm and test alarm are integrated and programmable
  - monitoring of all important functions
  - up to 10 days stand-by\*\*
  - optional with radio receiver to use the NEAT radio equipment e.g. trigger ATOM
  - with and without GPS available
  - programmable PIN codes small, only 100x48x20 mm 80g light weight (incl. battery)
  - positioning via GPS
- 

\*Changes, errors and omissions excepted. \*\*Depending on the settings and actions.
