TeleCare NEMO Domestic

A reliable companion at home or out door!

Explanation:

The great strength of the NEMO mobile care phone is its versatility: In your own four walls, in the garden, outdoors or on the way from point A to point B. Seniors, at-risk-patients, children and members of professions who often work alone, e.g. caregivers, farmers, security personnel or hunters need a modern, innovative companion. It can be used like a mobile phone on the go – but also as a normal personal emergency call device at home.

NEMO Domestic is equipped with a GPS-module and can transmit the location of the NEMO user in an emergency. The alarm is sent via SMS and/or a call. The SMS transmits the coordinates where the NEMO Domestic device is currently located.

Along with the emergency call button, the NEMO Domestic also has two speed-dial buttons that are completely programmable.

The alarm is sent via SMS and/or a call. The SMS transmits the coordinates where the NEMO Care device is currently located.

If NEMO Domestic is used as a personal alarm system, it is compatible with all accessories for our stationary emergency call systems thanks to the optional wireless components: From wireless alarms providing protection from smoke, gas, water or break-ins, to the ATOM hand-held wireless transmitter. Coupled with the proven water-tight hand-held transmitter, ATOM, an alarm can be sent at any time, even if the base device is not within reach, such as in the shower or in the garden.

Vantages:

- easy to handle and installation
 - displays status
 - rechargeable Lithium-Ion battery
 - function as passive alarm and test alarm are integrated and programmable
 - monitoring of all important functions
 - up to 10 days stand-by**
 - with and without radio receiver
 - radio receiver to use the NEAT radio equipment e.g. trigger ATOM
 - programmable PIN codes small, only 100x48x20 mm 80g light weight (incl. battery)
 - positioning via GPS
-
